DETAILED ACTION

Election/Restrictions

1. Claims 3-8, 10, and 11 are directed to an allowable method. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 9 and 12, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on December 27, 2006 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

2. Claims 3-12 (renumbered 1-10) are allowed. The following is an examiner's statement of reasons for allowance:

Sunamoto (US '498) is directed to a similar method, as compared to the claimed invention. In particular, the reference teaches a method of joining substrates using a self-piercing rivet, wherein an electrical current is passed through said rivet and one of

Art Unit: 1733

said substrates to fuse material at an interface between the rivet and said substrate.

However, as correctly argued by applicant (Page 9, 1st Paragraph), Sunamoto does not contemplate the use of a self-piercing rivet to mechanically and forcibly penetrate a force component and mechanically engage a second component to which it is then welded. One of ordinary skill in the art at the time of the invention would not have found it obvious to modify the method of Sunamoto to include the claimed mechanical engagement.

In regards to Wang (US 2004/0197134), the reference is generally directed to a method of joining a first and second substrate, wherein said substrates can be bonded by rivet bonding. However, the prior art references of record failed to suggest, disclose, or teach a bonding method in accordance to the claimed invention, including a mechanical connection between the respective substrates and a fused connection between a rivet and one of said substrates.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
